DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: element 40, 42, 44, and 46. See FIG-2B. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 45 thru 48, and 52 thru 57 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kao et al. 5,923,955 in view of Noordegraaf et al. IEEE. Kao discloses (see, for example, FIGURE 2E) a wafer 300 comprising micromechanical systems (released MEMS device) 310, and substrate 900. The wafer is consequently singulated into individual dies. However, Kao does not disclose a protective coating directly contacting and protecting the released MEMS device wherein the protective coating is selected from the group consisting of parylene, carbon, amorphous carbon, diamond-like carbon, perfluoropolyether, and perfluorodecanoic carboxylic acid. However, Noordegraaf discloses (see, for example, page

Art Unit: 2815

194, middle paragraph) a parylene coating (protective coating) on an electronic assembly.

Noordegraaf further states that the first layer of parylene provides superior electrical insulation.

Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to include the protective coating in Kao's invention in order to provide electrical insulation for the micromechanical systems.

4. Claims 49 thru 51 and 58 thru 60 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kao et al. '955 in view of Noordegraaf et al. IEEE as applied to claims 45-48, and 52-57 above, and further in view of Murakami et al. 4,691,225. Kao in view of Noordegraaf does not disclose the die being mechanically attached and electrically interconnected to a package. However, Murakami discloses (see, for example, FIG. 6) a semiconductor device comprising a semiconductor element 17 electrically interconnected to a package 11 (by wires 18). The package holds the semiconductor element and facilitates its integration into more diverse electrical devices. Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to have the die being mechanically attached and electrically interconnected to a package in order to hold a semiconductor element and facilitate its integration into more diverse electrical devices.

Response to Arguments

5. Applicant's arguments with respect to claims 45-60 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2815

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

INFORMATION ON HOW TO CONTACT THE USPTO

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Eugene Lee whose telephone number is 571-272-1733. The examiner can normally be reached on M-F 8-5.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tom Thomas can be reached on 571-272-1664. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
